## SUMMARY

Full-stack software engineer with 5 years of experience building production web and mobile products for clients in Canada and Ghana. I built **Otti** (managewithotti.com), a multi-tenant membership SaaS, from first MVP to production, and I'm building **Tsellr**, my own billing and accounting platform for Ghanaian businesses, across web, desktop, and mobile. I work across the stack: PostgreSQL schema design, Node.js and ASP.NET Core APIs, React and React Native front-ends, payments, and CI/CD. I also bring a decade of design and client work as the founder of a creative studio.

## TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, C#, SQL, HTML, CSS
- **Front-end:** React 19, Next.js 15, Vite, Tailwind CSS, Radix UI / shadcn/ui, Redux Toolkit
- **Mobile & desktop:** React Native, Expo, Tauri
- **Back-end:** Node.js, Express, ASP.NET Core 9, Entity Framework Core, REST APIs, Hangfire, BullMQ
- **Data:** PostgreSQL (incl. schema-per-tenant multi-tenancy), Redis, SQLite (offline-first), Sequelize, Prisma, Supabase
- **Payments & integrations:** Stripe, Paystack, MTN Mobile Money, SendGrid, Twilio, Hubtel SMS, Google OAuth
- **Testing & DevOps:** Jest, Vitest, xUnit, GitHub Actions, Docker, Nginx, PM2, Linux VPS
- **Ways of working:** AI-assisted development (Claude Code), remote collaboration, code review
- **Design:** UI/UX, Adobe Creative Suite (Photoshop, Illustrator, Premiere Pro, After Effects)

## EXPERIENCE

### Web Developer — Velte Technology Solutions

*Barrie, Canada (remote) · 2021 – Present*

- **Built Otti end-to-end** (managewithotti.com), a multi-tenant membership management SaaS. I started it as the **Membrr** MVP, adapted it into a single-organization platform for a client, then re-architected it for multi-tenancy with an **isolated PostgreSQL schema per organization**. Wrote ~500 of the repo's ~510 commits.
  - Next.js 15 + TypeScript front-end (300+ components and pages); Express API with 36 data models, 33 route modules, and 28 migrations.
  - Member management, Stripe payments, subscription packages and invoicing, bulk email/SMS via Redis + BullMQ queues, role-based access, Google OAuth, and reporting; 50+ test files.
- **Built the iOS/Android app for Legal Mate**, a multi-tenant SaaS for law firms (React Native, Expo, TypeScript). Clients view cases, documents, appointments, and invoices, pay in-app with Stripe, and message their firm in real time over server-sent events.
  - Biometric unlock, encrypted token storage, inactivity timeout, screen-capture protection, permission-aware UI, and per-firm branding; Jest tests.
- **Set up CI/CD for two production SaaS platforms** (Velte Hub and NPP Canada Connect): GitHub Actions staging and production pipelines, SSH releases to Linux servers, Nginx reverse proxy, PM2 process management, server provisioning scripts, and a separate staging database environment.
- **Built Velte Mailer**, a multi-tenant transactional email API implemented in both **Node.js and .NET (MailKit)**, with per-tenant API keys, rate limiting, HTML sanitization, honeypot bot detection, and template path-traversal protection.
- **Built the website and CMS dashboard for MUVULE Community Living Services** (Next.js 15, Prisma, PostgreSQL in Docker, NextAuth, Stripe, Jest).
- **Delivered websites for nonprofits and community organizations**, including Mesh of Mothers, Rescue Women International, and Fortress City Chapel (React, Node.js APIs, server-side email, SEO sitemaps).

### Founder & Creative Director — StarOne Studios

*Berekum, Ghana · 2014 – Present*

- Founded and run a creative studio delivering photography, videography, branding, and graphic design for events, product launches, and marketing campaigns.
- Built and maintain the studio's website and content management (React, Node.js).
- Manage client relationships end-to-end, from scoping and pricing to delivery. This is where I learned the product sense and stakeholder communication I bring to engineering.

**IT Support & Creative Specialist (Volunteer) — Leaving A Legacy LLC**

*Berekum, Ghana · 2018 – 2020*

- Provided IT and audio-visual support for organizational events and coordinated meetings and technical initiatives.
- Produced photography, video, and promotional design for the organization's marketing. I later built its website as a freelance project (see below).

## PROJECTS

**Tsellr — billing, invoicing & accounting platform for Ghana *(my own product · in staging)***

*ASP.NET Core 9 · C# · React 19 · Tauri · React Native · PostgreSQL · Redis · Hangfire*

- Designed and built a four-app product on my own, using Claude Code as an AI pair programmer: an ASP.NET Core API, a React web app, a Tauri desktop app, and a React Native mobile app. 600+ commits since February 2026.
- API with 62 controllers, 88 entities, and 114 EF Core migrations. Ghana Revenue Authority (GRA) E-VAT compliance, Paystack and MTN Mobile Money payments, SMS OTP sign-in via Hubtel, Hangfire background jobs, and Redis caching.
- Offline-first mobile app with a local SQLite store; 90+ test files (xUnit, Vitest); GitHub Actions for CI, Docker-based deploys, and automated desktop releases.

**Reboot Ghana — e-commerce, POS & CRM for refurbished electronics *(my own project)***

*Next.js · TypeScript · ASP.NET Core · Entity Framework Core · PostgreSQL · Paystack*

- Built a customer-facing online store plus internal CRM and point-of-sale apps on a shared ASP.NET Core API, covering product intake and refurbishment tracking, inventory, orders, deliveries, and Paystack payments.

**Freelance**

- **Leaving A Legacy:** website for the nonprofit I once volunteered with (React, Node.js), 2023–2025.
- **Hestias:** e-commerce marketplace with Stripe checkout, form validation, and animated UI (React, Formik, Framer Motion).

## EDUCATION

**BSc Computer Science** — University of Energy and Natural Resources, Sunyani, Ghana · 2017 – 2021

**WASSCE** — St. James Seminary Senior High School, Sunyani, Ghana · 2010 – 2013
